Find blood. Fast.

A free website that helps people in India find blood: nearby blood banks first, then donors who have confirmed on Telegram that they are available.

How to use this file

1. Read BLOOD_FINDER_PROGRESS.md first. It holds the build order, the rules (stop after every feature, explain, ask) and the free-only budget rule.

2. Use this PDF as the visual reference. Match the layout, colors, spacing and wording of every screen, on mobile and on desktop.

3. Screens use placeholder data (Blood Bank Name, Donor Name, [Area name]). Replace them with real data from the database.

4. Do not add images, banners, sliders or pop-ups. If something is missing from the design, ask the owner before inventing it.

Colors

- Primary red: #C62828
- Hover red: #B71C1C
- Light red background: #FFF5F5
- Icon tint: #FDECEC
- Text: #1F1F1F
- Secondary text: #4A4A4A / #5F5F5F
- Panel gray: #F7F7F7
- Borders: #E0E0E0 / #BDBDBD

Type, shape and spacing

- Font: Public Sans (400, 600, 700, 800). Fallback: system sans-serif.
- Body text 16 px minimum on inputs; secondary text 13 to 15 px.
- Headline 40 px mobile, 60 px desktop. Card titles 26 px mobile, 32 px desktop.
- Primary button: 52 px high, 12 px radius, solid red, white bold text.
- Secondary button: 52 px (44 px inside lists), white, 2 px red border, red text.
- Inputs: 48 px high, 10 px radius, 1.5 px gray border, always with a visible label.
- Cards: 14 to 20 px radius. Minimum tap target 44 px. Text contrast 4.5:1 or better.

Responsive rules

- Design mobile first (390 px wide). Layouts are fluid; the screens that follow show a phone view and a 1280 px desktop view.
- Below 640 px everything is one column. From 640 px the two homepage cards sit side by side.
- Desktop content is centered with a 1120 px maximum width and 48 px side padding.
- Wide columns wrap instead of shrinking (flex-wrap, minimum column about 300 px). Nothing scrolls sideways.

1. Home

Route: / | Progress file: Feature 2

Design notes for the agent

- Two large cards are the whole point: red "I need blood" (most prominent) and white "I want to donate".

- Find Blood goes to /need-blood. Become a Donor goes to /donate.

- Header: RaktSetu name in red text (no logo image) and a Call 112 button (tel:112).

- Hero: eyebrow, tagline "Find blood. Fast." and one supporting sentence.

- How it works: 3 numbered steps. Stacked on mobile, one row on desktop.

- Privacy note and emergency note in footer. No images, sliders or pop-ups.

BLOOD BANK AND DONOR FINDER

Find blood. Fast.

Search nearby blood banks. If none can help, reach who have confirmed they are available.

I need blood

Find blood banks and donors near the patient

Find Blood

I want to donate

Register so someone in need can reach you

Become a Donor

How it works

1 **Enter the patient's details**
Name, age, blood group and location.

2 **See blood banks near you**
Call or get directions in one tap.

3 **Reach confirmed donors**
We ask nearby donors if they are available first.

Your privacy. A donor's name and number are shown only after they say yes.

Desktop (1280 px wide)

Register so someone in need can reach you

Become a Donor

How it works

1 **Enter the patient's details**
Name, age, blood group and location.

2 **See blood banks near you**
Call or get directions in one tap.

3 **Reach confirmed donors**
We ask nearby donors if they are available first.

Your privacy. A donor's name and number are shown only after they say yes.

In a life-threatening emergency, call 112 or go to the nearest hospital. Always call a blood bank to confirm stock.

2. I need blood

Route: /need-blood | Features 3 and 4

Design notes for the agent

- Fields, nothing more: patient name, patient age, blood group, location, requester phone.

- Location: "Use my current location" (GPS) or search box; confirm the address before submit.

- Validate inline: age 0 to 120, Indian mobile (10 digits, starts 6 to 9, +91 accepted).

- Add Cloudflare Turnstile (free) before the submit button (Feature 11).

- Submit saves the request and goes to /results/[requestId].

- Desktop: intro on the left, form card on the right. Mobile: single column.

3. Blood banks

Route: /results/[id] | Features 5 and 7

Design notes for the agent

- Banks sorted nearest first. Each card: name, distance, address, Call (tel:) and Directions (Google Maps link).

- The red "Can't find blood? Find donors nearby" button must be visible in every state: results, far away, or empty.

- Show the notice "Stock changes quickly. Please call to confirm availability."

- Empty state: "No blood banks found nearby." plus the same donor button.

- Clicking the button starts the donor search and opens the donor screen.

- Desktop: list on the left, red donor panel on the right.

In a life-threatening emergency, call 112 or go to the nearest hospital. Always call a blood bank to confirm stock.

4. Available donors

Route: /donors/[searchId] | Features 8, 9, 10

Design notes for the agent

- Donors are asked on Telegram first. A card appears here only after the donor taps Yes.

- Never show donors who said No or did not reply; only the counts in the status line.

- Card: name, blood group, approximate distance, phone, Call (tel:) and WhatsApp (wa.me link with a prefilled message).

- New cards appear live (polling every 5 s or realtime) with a gentle fade-in.

- Ask more donors widens the radius. Mark as found closes the search and tells pending donors.

- Cards expire after 24 hours. Desktop shows cards in a wrapping grid.

5. Become a donor

Route: /donate | Feature 6

Design notes for the agent

- Fields: name, age (18 to 65), blood group, location, phone, last donation date (optional).

- Both consent checkboxes are required: asked on Telegram, and name and phone shared only after Yes.

- Button text: "Register and connect Telegram". It opens the bot with a one-time code; the donor taps Start and shares their contact to verify the number.

- Hide donors who donated less than 3 months ago.

- Donors can pause or delete their profile at any time.

- Desktop: reasons on the left, form card on the right.

Flow and feature map

What connects to what

Home -> I need blood form -> Blood banks -> (always available) Find donors nearby -> Telegram asks donors -> Yes replies appear as donor cards.

Home -> Become a donor form -> Connect Telegram (verifies phone) -> Donor is active and can be asked.

Feature 1	Setup, theme tokens above, shared Button, Card, Input, Select, Header, Footer components.
Feature 2	Home (screen 1).
Features 3 and 4	I need blood form and location (screen 2).
Feature 5	Blood bank list with the always-visible donor button (screen 3).
Feature 6	Become a donor with consent and Telegram verification (screen 5).
Features 7 to 10	Donor matching, Telegram availability check, reply webhook and live donor cards (screen 4).
Features 11 and 12	Safety, privacy, abuse protection, polish and free deployment.

Accessibility: real buttons and links, labels on every input, icon-only elements hidden from screen readers, keyboard focus visible, text contrast 4.5:1 or better, tap targets 44 px or larger.
